

Parish Nurse Notes – June 2, 2024

Alzheimer's & Brain Awareness Month

Nearly 55 million people live with Alzheimer's or another dementia. Early signs of the disease include memory loss, challenges in problem-solving, difficulty completing tasks, and changes in character. During June, communities come together to recognize the Longest Day – the summer solstice June 21st – when people across the nation fight the darkness of the disease on the day with the most light. You can join the fight to #EndAlz by wearing purple – the color of Alzheimer's awareness, participating in a fundraising event on The Longest Day, or donating to the cause.

10 WARNING SIGNS OF ALZHEIMER'S

1. **MEMORY LOSS THAT DISRUPTS DAILY LIFE.**

One of the most common signs of Alzheimer's disease, especially in the early stages, is forgetting recently learned information. Others include forgetting important dates or events, asking the same question repeatedly, or increasingly needing to rely on memory aids (e.g., reminder notes or electronic devices) or family members for things the person used to handle on their own. What's a typical age-related change? Sometimes forgetting names or appointments but remembering them later.

2. **CHALLENGES IN PLANNING OR SOLVING PROBLEMS.** Some people living with dementia may experience changes in their ability to develop and follow a plan or work with numbers. They may have trouble following a familiar recipe or keeping track of monthly bills. They may have difficulty concentrating and take much longer to do things than they did before. What's a typical age-related change? Making occasional errors when managing finances or household bills.

3. **DIFFICULTY COMPLETING FAMILIAR TASKS.** People living with Alzheimer's disease often find it hard to complete routine tasks. Sometimes they may have trouble driving to a familiar location, organizing a grocery list, or remembering the rules of a favorite game. What's a typical age-related change? Occasionally needing help to use microwave settings or to record a TV show.

4. **CONFUSION WITH TIME OR PLACE.** People living with Alzheimer's can lose track of dates, seasons, and the passage of time. They may have trouble understanding something if it is not happening immediately. Sometimes they may forget where they are or how they got there.

What's a typical age-related change? Getting confused about the day of the week but figuring it out later.

5. TROUBLE UNDERSTANDING VISUAL IMAGES AND SPATIAL RELATIONSHIPS. For some people, vision problems are a sign of Alzheimer's. This may lead to difficulty with balance or trouble reading. They may also have problems judging distance and determining color or contrast, causing issues with driving. What's a typical age-related change? Vision changes related to cataracts.

6. NEW PROBLEMS WITH WORDS IN SPEAKING OR WRITING. People living with Alzheimer's may have trouble following or joining a conversation. They may stop in the middle of a conversation and have no idea how to continue or repeat themselves. They may struggle with vocabulary, have trouble naming a familiar object or use the wrong name. What's a typical age-related change? Sometimes having trouble finding the right word.

7. MISPLACING THINGS AND LOSING THE ABILITY TO RETRACE STEPS. A person living with Alzheimer's may put things in unusual places. They may lose things and be unable to go back over their steps to find them again. He or she may accuse others of stealing, especially as the disease progresses. What's a typical age-related change? Misplacing things from time to time and retracing steps to find them.

8. DECREASED OR POOR JUDGMENT. Individuals may experience changes in judgment or decision-making. For example, they may use poor judgment when dealing with money, or pay less attention to grooming or keeping themselves clean. What's a typical age-related change? Making a bad decision occasionally, like neglecting to change the oil in the car.

9. WITHDRAWAL FROM WORK OR SOCIAL ACTIVITIES. A person living with Alzheimer's disease may experience changes in their ability to hold or follow a conversation. As a result, they may withdraw from hobbies, social activities, or other engagements. They may have trouble keeping up with a favorite team or activity. What's a typical age-related change? Sometimes feeling uninterested in family or social obligations.

10. CHANGES IN MOOD OR PERSONALITY. Individuals living with Alzheimer's may experience mood or personality changes. They may be easily upset at home, at work, with friends or when out of their comfort zone. What's a typical age-related change? Developing very specific ways of doing things and becoming irritable when a routine is disrupted.

If you're concerned that you or someone you know is displaying any of these signs, take action:

- Talk to someone you trust. It can be helpful to confide in a friend or family member. For tips on how to have a conversation, visit alz.org/memoryconcerns.
- See a doctor. Get a full medical evaluation to determine if it's Alzheimer's or something else. Early diagnosis gives you a chance to plan, access support services and explore treatment options. To learn more about the diagnostic process, visit alz.org/evaluatememory.
- Get support and information. Call the Alzheimer's Association 24/7 Helpline (800.272.3900) or visit alz.org/10signs.
